

J.B.Andersen

Marine Biochemicals AS is a Norwegian manufacturer (SME) of cold adapted/heat labile enzymes based in Tromsø. The products are sold into the high value gene technology market and the company is very profitable and growing very fast. Marine Biochemicals has developed a unique collaboration model integrating the academic bioprospecting and research activities with commercial product development and sales of products in the market. The company is experiencing strong synergies from that collaboration and is investing in expanding the activities.
